

**Forecast conditions represent impacts from smoke. Contributions from ozone and other pollutants are not reflected.**

Weather and Smoke Information: The fire is located in elevation range of 6000-8000 feet. Fire is most active in the mid to late afternoon causing smoke production to be at its greatest. Southwest winds are expected to transport smoke to the Northeast until 8:00 PM when the wind is expected to be out of the North-Northeast, transporting the smoke to the Southwest. Smoke tends settle into the San Joaquin river drainage. Smoke at the Devils Post Pile Visitor Center reached Very Unhealthy levels between 1:00 PM and 4:00 PM on 6/24.

**Smoke Impacts from Local Fires**

Site	Observed Midnight-Midnight June 24, 2018	Forecast June 25, 2018	Outlook June 26, 2018	Worst Time of Day Impacts AQI and Period

Devils Post Pile	Unhealthy	Unhealthy	Unhealthy	Unhealthy to Very Unhealthy condition can be expected for Noon to 10 PM

**Colors displayed above correspond roughly with the AQI chart below.**

Conditions may change quickly, these projections are based on anticipated weather and fire activity. Sensitive groups including individuals with Asthma, lung or heart disease, children, older adults, and pregnant women should take precautions to avoid exposure to smoke. If you feel as though you are having health effects from smoke see your doctor or health professional as needed. In some cases your eyes are your best tools, if it is smoky outside you are being impacted. Use caution when driving in or around smoky areas.

AQI Index	Actions to Protect Yourself
Good	None
Moderate	Unusually sensitive people should consider reducing prolonged or heavy outdoor exertion.
